

**Active Ingredient:** Concentrated Fulvic Acid  
*Concentré de Acides Fulviques Fluides*  
**Formulation Type:** Concentrated Aqueous Mixture

## Nutrient Transport Catalyst Biosolution

Nutex™ FA is a next-generation concentrated fulvic acid solution for all liquid soil and foliar applied fertilizer applications. Nutex™ FA, when applied at planting, can optimize planter band soil conditions to support improved germination and root growth, resulting in a more optimized return on investment for all **cereal and pulse crops**. When foliar applied, Nutex™ FA organically "complexes" tank mix partners, helping to transport nutritionals into plant tissue to where those nutritionals are needed most.

## Naturally Derived Biosolution

Nutex® FA is a naturally derived, nutrient transport catalyst for all liquid nutrient solutions that offers versatility across both foliar-applied nutrient sprays and soil-applied starter and in-season applications. This Sipcam Agro Canada biosolution has been tested and proven under real-world conditions by agronomists who demand results. With long-term compatibility and low use rates, Nutex® FA provides optimal return on investment for all crops. Nutex® FA supports plant nutrient uptake efficiency for better root growth and function as it enhances and supports microbial populations in the planting zone when used with starter fertilizers...and Nutex® FA is a superior tank-mix partner with all fertilizers and plant protection products!

Chickpeas

## Features and Benefits

- Supports plant nutrient uptake efficiency and optimizes soil conditions for greater seed germination, better root growth and overall plant function
- Enhances and supports microbial populations in the planting zone when used with starter fertilizers
- Superior tank-mix partner with all fertilizers and plant protection products
- High-activity performance with low dosage
- Improves abiotic stress tolerance
- Excellent ROI

Wheat
